

SOLIPSIS
COMFORT CLASS IN ICT

Your information, always and everywhere

Advanced digital document management

To digitalize the provision of information is one of the most innovative ICT developments at this moment. In the past, documents covered a neatly arranged (paper) route which offered sufficient room for overview and the execution of subsequent tasks. Nowadays, the entire world is within reach with a press of the button.

The ever increasing flow of documents is inevitable. Companies holding on to the traditional way of managing information will lose control. Keeping a grip on matters requires a completely different approach towards distribution, filing and providing online accessibility of documents. It requires advanced digital document management.

Better control will save you money

Companies controlling the digital provision of information process and who are able to anticipate rapidly are offered many (new) opportunities. Proceeding decisively and being more complete in comparison with the rest. To act more transparent and be more customer-friendly than others. Green IT and a corporate social responsibility. Above all, to digitalize means saving. Savings up to 60% on working hours and costs for print-outs and printed papers, paper, postage and labour are feasible.

The Enterprise Document Management of the Solipsis Group will offer you control, information and savings. Our solutions will provide you with structure, control, overview and accessibility. *Very comfortable.*

Enterprise Document Management; management of complex document environments

Enterprise Document Management (EDM) includes the management of automated flow of documents. Due to ingenious technology, EDM will help you retrieve more from your company information. The Solipsis Group will offer you:

- distribution of documents (UniSpool);
- registration and unlocking (IntraOffice);
- control- and management information;
- ICT capacity at a distance (cloudhosting).

What connects and at the same time distinguishes these products and services from other providers:

- independent of hard- & software;
- high performance, high volume capabilities;
- suitable for complex document environments;
- multichannel distribution (using several communication channels at the same time);
- high-speed, both in processing and availability;
- future-proof with a fast return of investments;
- proven technology.

IntraOffice for every file and every document

- simple, rapid and world-wide online retrieval of documents
- highspeed processing (> 1,000 documents/second!)
- e-recognition, digital signature, e-notifications, online payments
- user-friendly monitoring facilities
- rapid 'go-to-live' due to intelligent architecture
- clear fixed price: all-in and pay per use
- transparent, safe/reliable filing of documents, minimum storage costs

In 1996, IntraOffice was the first complete solution for digital file management with support for bulk computer output.

UNISPOOL® for all output

- large output volumes without problems
- rapid processing of printing files
- optimal use of printing capacity
- highly reliable processing
- security to different adjustable user levels
- insight into the progress of a process
- extensive management information about the use

UniSpool is based on more than 25 years of experience in large computer networks with, among other things, tens of thousands of printers.

UniSpool; high performance control of output streams

UniSpool (Holland House) improves the efficiency of mass volume digital document distribution, both in your production- and office environment (simultaneously). Regardless of the destination, through which channels and in which form (print, mail, web, ftp, sms, fax) on which moment and to which extent. Are you operating multilingual? Are you using several corporate identities? Do you work with several brands of hard- and software? Is your network situated on different physical locations? UniSpool has been designed for just that. One tool for all your output and devices. This way UniSpool distinguishes itself from a standard output- and print management system. In addition to this, UniSpool is SAP certified.

IntraOffice; high volume digital registration

IntraOffice is a highly organized, well secured digital registration system that offers employees or customers online insight into their own files. IntraOffice is not dependent on a system (SaaS, Software as a service) and as a result, it is operable in connection with all your company applications. The 100% zero footprint client system is particularly suitable for organisations processing large amounts of documents, for instance companies taking care of the salary records, telecom companies, insurance- and power supply companies. In addition, IntraOffice will add a new dimension to the use of information. By a clever connection of digitally registered files, the formerly static information will come to life. Analysis and comparison will soon deliver additional sales opportunities.

Hosting; ICT capacity at a distance

The impact digitalized provision of information could have on your automation organisation is enormous. If, for instance, your digital records have to function as customer service at the same time, it should be available 24/7. As a consequence, it is of the utmost importance that your servers, storage capacity and networks are prepared for this. For this situation, Solipsis is able to offer you cloudhosting: ICT capacity at a distance on the moments in time you need it to be available. As a result, the availability of your registered documents is arranged in an optimal manner.

Management information; insight into company processes

Useful information can be derived from every company process. Most systems, for instance UniSpool and IntraOffice, even offer several reporting options. Specific management information modules offer, if so desired, cross company or in-depth insight. They review the delivered performances of systems and processes, uncover (unexpected) links and offer you neatly arranged management information. You can see exactly what is happening, what could be happening and what should be happening. Solipsis delivers several management information solutions that are based on your situation and can be easily implemented in your current environment. *Very comfortable.*

The Solipsis Group: Solipsis, Holland House and IntraData

The Solipsis Group offers you an extensive package of ICT-related services and products, divided in four business units: Performance Management, System and Network Control, System Development and Enterprise Document Management.

ICT service provider Solipsis (1990) is founder of the Solipsis Group which was established in 2006 after the take-over purchase of Holland House. In 2008, the Group was extended by the purchase of IntraData. Solipsis b.v. and Holland House b.v. both reside in the same office in Brakel (municipality of Zaltbommel). IntraData b.v. maintains an office in Schiphol-Rijk.

Holland House has been specializing in the development and implementation of output- and print management software since 1984. In 1996, IntraData put the first version of their document management system IntraOffice onto the market. It is the first complete solution for digital registration management with the support of mass volume document flows. In co-operation with Solipsis, Holland House and IntraData deliver the products and services from the business unit Enterprise Document Management.

De Solipsis Group; Comfort Class in ICT. Let your ICT be our responsibility. *It's all about convenience.*
